Abstract

The article analyses the factors which provide efficient interaction between real and financial regional economy in the frame of integrate holding structure (IHS), where bank is the financial center. The authors offer performance evaluation methods for institutional integration forms. They prove that government regulatory control is a prerequisite to implement the bank strategy. This control includes creation of institutional environment on banking and financial service market, creation of a government programme to provide minimum bank and financial services, adjustment of the main offices of the Bank of Russia in accordance with the district structure.
